Foreword

The Population Census of 2018 was taken on the night of 13 to 14 October 2018, the first census of the population of Irad since the All-Union census of 1989. Enumerators of the Territorial Statistics Office visited every dwelling in the three cities of governorate significance and in the districts of the Zone between 14 October and 2 November 2018. This volume gives the main results; detailed volumes on housing, migration and the labour force were published in 2019 and 2020 and can be consulted in the Office's reading room.

The census counted the resident population: persons who had lived at the address for twelve months or intended to do so, wherever they were registered. Persons absent abroad for work for more than a year were not counted. Personnel of foreign installations and members of their families were not enumerated.

Enumerators were not received in the Autonomous Tribal Region. Its population was estimated from administrative records and the 1989 census and is published as a single figure. Tables 4 to 8 refer to the enumerated population of the Zone only.

All figures are rounded to the nearest hundred; totals may differ slightly from the sum of their parts.
